

OIS Software Assurance

The current version of the HPE Fortify SCA software is 16.20 and the current version of the rulepacks is 2016.4
Register your application, request VA-licensed Fortify software, training, and support [HERE](#)

This page has been made public for vendors

Welcome!

This VA Software Assurance Support Site provides information to assist VA Application Developers with performing secure code reviews both during development and also during Assessment and Authorization (A&A) and continuous monitoring.

Our mission is to get secure code review tools to developers and then to make sure they use them, correctly and to VA standards. Our office distributes and supports VA-licensed HPE Fortify SCA software, and performs authorization checks as part of the ATO issuance process.

In support of our mission this site is provided to make program guidance transparent and support easily accessible. VA Secure Code Review Standard Operating Procedures (SO P), Frequently Asked Questions (FAQs), and [Technical Notes](#) are key resources that can be found on the site.

Additional types of resources can be found on the VA Software Assurance Support Site such as the VA Software Assurance Program Office Blog which can be accessed [here](#). Announcements such as new HPE Fortify Static Code Analyzer (SCA) software and rulepack releases are posted to the Blog.

Relationships among key participants within the VA to implement a code review authorization gate at enterprise scale for VA custom-developed applications are depicted in the figure below for reference.
